Start-up of the lift truck business

At first the domestic lift truck market in Korea was an open import enterprise. Korea Machinery Co. Ltd. began in 1960, to import fully assembled lift trucks as part of a domestic machinery expansion project. Product sales of these goods were primarily targeted to state-run companies, large scale organizations, and the armed forces. This eventually led to a unification with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division commenced business operations throughout Korea to overhaul and sell this heavy equipment. By 1978, a lift truck manufacturing plant was successfully completed. Continuous technical training became the new focus for improving quality and product development.

Forklift Export Expansion

Home-based lift truck business for Daewoo started in 1967 and grew to an astonishing 90% market share in Korea. By the 1980's, Daewoo's progressive technological improvements combined with sales success placed them in a position of significant growth of their forklift business.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a joint venture project to counter act competitive pressures in the US materials handling market. This project greatly expanded Daewoo's forklift sales. Construction was completed in 1984 to facilitate a contemporary plant which helped set up the business for the fabrication of high added-value products suitable for export. In 1993, the corporation had a global sales network and started exporting versions they had developed through in-house expertise, as an sovereign brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing growth possibilities into overseas markets.
