

## JLG Telehandler

JLG Telehandler Training London - In the late 1960's John L. Grove, with his wife Cora set out on a cross country excursion in their RV. Freshly retired, after spending many years working with his brother to develop their crane business into an industry leader, John had no idea that important trip would permit JLG Industries, Inc to emerge. The world leader of mobile aerial work platforms and precision materials handling equipment was the end result of a road trip.

During their trip, John reacquainted himself with former business connections along the way. In combination with these conversations and a noteworthy event; two workers were tragically electrocuted on scaffolding when the Groves were passing through the Hoover Dam. John discovered a substantial market for a product that could promptly and securely lift people in the air to accomplish maintenance and other construction services.

After returning from their vacation, John set up a partnership with two of his friends and bought a metal fabrication business in McConnellsburg, Pennsylvania. Opening with a small crew of twenty employees, they fashioned and sold their first JLG aerial work platform in 1970. The business incorporates many of the basic design elements of that original lift into current versions.

JLG forklifts have come a long way since Mr. John L. Grove came back to town from his cross-country road trip and since the first aerial work platform debuted on the market. These days, the company proudly continues to expand itself into different marketplaces globally and develops new products to make certain clients are capable of being more efficient and perform in the workplace within a safer atmosphere.
